

BHARAT NATRAYN G

Next.js / React Developer | Performance & SEO Optimisation | 4+ Years

bharatnatrayn00@gmail.com | +91 9080009619 | <https://linkedin.com/in/bharat-natrayn> | Chennai, India

PROFESSIONAL SUMMARY

Frontend Developer (Next.js / React) with 4+ years of experience building production-grade, multilingual, and SEO-optimized platforms. Specialized in SSR, SSG, ISR, Core Web Vitals optimization, and bundle size reduction for high-traffic applications. Led a Next.js migration reducing page load time from 7s to under 3s and architected a global event platform handling 2M+ user registrations. Led a frontend team of 3 engineers while owning end-to-end delivery.

KEY ACHIEVEMENTS

- **2M+ user registrations** — Delivered multilingual global event platform across 12+ languages & regions
- **7s → <3s page load (57% faster)** — Next.js App Router migration with SSG, ISR & image optimisation
- **70% session duration increase** — Core Web Vitals (LCP, CLS, FID) optimised to 'Good' thresholds across all pages
- **700K+ attendees** — Automated certificate & attendance workflows with zero manual intervention

TECHNICAL SKILLS

Frontend: Next.js | React.js | TypeScript | JavaScript (ES2022+) | HTML5 | CSS3

Performance: Core Web Vitals | Lighthouse | Webpack | Code Splitting | Lazy Loading | Bundle Optimisation | Image Optimisation | Performance Profiling

Architecture: SSR | SSG | ISR | App Router

Styling & UI: Tailwind CSS | ShadCN UI | CSS Modules | Responsive Design | Mobile-first Architecture

State & APIs: Redux Toolkit | REST API | GraphQL | Strapi CMS (headless)

Tools: Git | GitHub | GitHub Actions (CI/CD) | Lighthouse | Figma | Agile | Chrome DevTools

WORK EXPERIENCE

Frontend Developer (Next.js / React) — Aziro Technologies, Chennai December 2021 – Present

- Architected multilingual event platform (12+ languages) enabling 2M+ registrations across 12+ regions in a single campaign cycle; automated certificate & attendance workflows for 700K+ attendees with zero manual intervention
- Migrated React SPA → Next.js App Router; reduced load time 7s → <3s (57% faster) via SSG, ISR & Webpack bundle optimisation; improved session duration ~70% through Core Web Vitals (LCP, CLS, FID) fixes and SEO-first rendering
- Built multi-tenant LMS with isolated orgs, courses & quiz configs; integrated Razorpay payment gateway with automated access provisioning and 100% automated grading & certificate generation
- Rebuilt UI component library with ShadCN/UI & Tailwind CSS — cut new feature delivery time by ~40%; collaborated with 2 backend engineers and 1 designer across all platform builds
- Led frontend delivery end-to-end from Figma handoff to production for 3 concurrent platforms

PROJECTS

World Meditation Day — Multilingual Global Event Platform meditationday.global

Next.js · TypeScript · next-i18next · Strapi CMS · Vercel · GitHub Actions

- Designed locale routing strategy using Next.js App Router with [locale] dynamic segments and hreflang tags — enabling 12+ language variants from a single codebase without duplicating page logic

- Architected Strapi CMS content model to support per-locale field overrides, decoupling content from code so regional teams could update copy without a deployment
- Solved peak-load scalability by pre-generating all locale/page combinations at build time (SSG) and configuring ISR fallback only for low-traffic variants — keeping origin load near zero during the campaign spike
- Set up GitHub Actions pipeline to trigger incremental ISR revalidation on CMS publish events, eliminating manual rebuild cycles across 12+ regions

Heartfulness — Website Migration & Performance heartfulness.org

Next.js App Router · ShadCN UI · Tailwind CSS · Webpack · Lighthouse CI · Vercel

- Planned and executed a zero-downtime migration from React SPA to Next.js App Router — incrementally wrapping legacy routes inside the Next.js shell before cutting over DNS, with feature flags controlling rollout per page group
- Identified LCP bottlenecks using Chrome DevTools and Lighthouse CI; fixed by converting hero images to next/image with priority loading, extracting critical CSS, and eliminating render-blocking third-party scripts
- Replaced a bespoke component library with ShadCN UI — audited existing components for parity, created a migration guide for the team, and set up a shared design token file in Tailwind config to enforce visual consistency

Yoga LMS — Multi-Tenant Learning Management Platform

Next.js · Strapi CMS · Redux Toolkit · React Query · Razorpay · Vercel

- Designed multi-tenancy architecture using subdomain-based org isolation — each org resolves to a unique Strapi content space with independent course, quiz, and user config, without any shared-data leakage
- Built a quiz engine as a finite state machine (idle → in-progress → submitted → graded) using Redux Toolkit slices; state shape designed to support auto-save and resume on page refresh
- Handled Razorpay webhook verification server-side with signature validation before triggering access provisioning — ensuring no course access was granted on failed or tampered payment callbacks

AWARDS & RECOGNITION

- **1st Place — Heartathon 2025 Hackathon** | Aziro Technologies — Top performer in internal innovation challenge
Certificate : <https://drive.google.com/file/d/1Wfw-IFTL0BqbpDMLqIqmDwwK3yvtzZW6/view>
- **Excellence Award** | Aziro Technologies — Recognised for outstanding contribution to Heartfulness platform migration
Certificate : https://drive.google.com/file/d/16lxLOtORX8oawzjVYT_Hi23s0fbgDm0h/view

EDUCATION

B.E. Computer Science Engineering 2017 – 2021

Jeppiaar SRR Engineering College, Chennai
